👑 Realcrown (RC) Whitepaper v2.0

The Proof-of-Trust Social Ecosystem

April 2026

Official Entity: REALCROWNNET PRIVATE LIMITED (India)

Web: www.realcrown.org | www.realcrown.net

1. Executive Summary

Realcrown is a decentralized social engagement platform designed to prioritize authentic human interaction over algorithmic amplification. The platform introduces a Proof-of-Trust (PoT) model, where content visibility and rewards are influenced by community validation rather than automated ranking systems.

Realcrown operates using a dual-layer system:

- Crown Points (off-chain engagement units)
- RC Tokens (on-chain utility tokens on Polygon)

This structure balances usability with blockchain transparency, enabling scalable participation while maintaining verifiable token utility.

2. The Problem

Current social media platforms face structural limitations:

2.1 Engagement Manipulation

Bots, fake accounts, and coordinated engagement distort content visibility.

2.2 Centralized Value Capture

Users generate content, but platforms retain the majority of economic value.

2.3 Lack of Transparency

Algorithms controlling reach and monetization are opaque and unverifiable.

3. The Realcrown Solution

Realcrown introduces a human-validated engagement system supported by blockchain infrastructure.

Core Principles:
- Human Validation over Algorithms
- Transparent Utility via Blockchain
- User Participation in Value Distribution

4. Proof-of-Trust (PoT) Mechanism

Proof-of-Trust is Realcrown's internal validation framework that evaluates content authenticity and user behavior.

4.1 Key Components

a. Identity Layer
- Optional KYC verification (required for token bridging)
- Device-level and behavioral analysis to reduce fake accounts

b. Reputation Score
- Users accumulate a dynamic trust score based on:
  - Content quality
  - Engagement consistency
  - Community feedback

c. Weighted Validation
- "Marks" (Crown Points) are not equal:
  - Higher reputation users have greater influence
  - Suspicious activity reduces weight

d. Abuse Prevention
- Rapid reporting and "chain pull" moderation system
- Temporary or permanent restriction for malicious actors

5. Ecosystem Design

5.1 Crown Points (Off-Chain)

- Allocated for user engagement (posting, commenting, validating)
- Non-transferable within blockchain
- No direct market value

5.2 RC Tokens (On-Chain)

- Polygon-based utility token
- Used for:
  - Content boosting
  - Governance participation
  - Premium feature access

6. Conversion Mechanism

Crown Points may be converted into RC Tokens through a controlled process.

6.1 Conversion Rules

- Subject to eligibility and verification (KYC required)
- Based on platform activity and system health

6.2 Standard Conversion Benchmark

- 1000 Crown Points = 1 RC (indicative, not fixed)

6.3 Dynamic Adjustment Model

- Conversion ratios may adjust over time based on:
  - User growth
  - Token circulation
  - Ecosystem sustainability

7. Tokenomics

Token Name: Realcrown (RC)
Blockchain: Polygon (PoS)

Total Supply: 1,000,000,000 RC

Allocation:

- Ecosystem Rewards: 50% (500,000,000 RC)
- Liquidity & Listings: 20% (200,000,000 RC)
- Development & Operations: 15% (150,000,000 RC)
- Founding Team: 10% (100,000,000 RC)
- Community Initiatives: 5% (50,000,000 RC)

Vesting:
- Founding Team tokens subject to 4-year vesting with 12-month cliff

8. Governance Model

RC token holders may participate in ecosystem decisions, including:
- Feature prioritization
- Platform policy feedback
- Reward distribution adjustments

Governance mechanisms may evolve toward partial decentralization over time.

9. Security & Integrity

- Smart contracts deployed on Polygon network
- Planned third-party security audits
- Continuous monitoring for fraudulent activity

10. Roadmap (2026)

Q1: Company incorporation & infrastructure setup
Q2: Beta launch (Crown Points system)
Q3: Token bridge activation + compliance onboarding
Q4: DEX integration & ecosystem expansion

11. Legal & Compliance (India)

Realcrown aligns with applicable Indian regulations:

- Virtual Digital Asset (VDA): RC classified under applicable laws
- Taxation: Users responsible for applicable taxes (including 30% on gains)
- TDS: 1% deduction as per Section 194S
- KYC/AML: Required for token withdrawals in accordance with PMLA 2002

12. Risk Factors

Users should be aware of the following risks:

- Market volatility of digital assets
- Regulatory changes in crypto policies
- Platform adoption dependency
- Potential misuse of engagement systems

13. Disclaimer

Realcrown is a social engagement platform.
RC tokens are designed for ecosystem utility and access.

Realcrown does not guarantee financial returns, profits, or investment outcomes.
Participation is voluntary and subject to platform terms and applicable laws.
